

become Ability person of “Time Control”

- (World's First) We spent four year in commercialize the "time" of the sky. -

Early morning life was I thought it impossible, because I thought it's typical night owl.

Realization in relative time system with A new technique that appeal to human psychology in Japan health promotion Medical Association in May 2015. Now, a system that has been attracting attention. Expectations for mental health care sought to modern society is also high. And reduce stress, efficiency, improvement of life rhythm, training.

has been real-life example in the early morning type already.
And Other it has also been applied.

We there is a time stifling on clock of accurate by UTC (Coordinated Universal Time) and spend in the 24-hour society. These life rhythm and mental, and stress, which are also closely related, it has become a social problem.

convex corporation ,ltd. has released the iPhone / Android app "SoraJikoku BASIC" on September 16th. This is a system that combined the position and speed control can be relative time system and empty time. Can be illusion the time by SoraJikoku, it is an introductory version that will support the psychological plane in human time.

Please interview and articles published.

Can carry the sky that suits your lifestyle, without stress, And it will changing the psychological time. (PAT.P)

IT EMBODIES THE FRESH IDEAS.

- TIME ILLUSION APP SORAJIKOKU -

convex corporation ,ltd.

May 2015

24 hours a day, everyone is given equally around the world. However, the perception of time different on each person. Fun time end quickly, painful time it feels like endless. Was focused on this illusion is the "SoraJikoku". In addition to time illusion, and fusing the ability to feel light.

This effect has the potential as follows. Increase the efficiency of the exam study, Life rhythm adjustment of people who are forced to irregular life, Prevention of missed the last train of salaried workers, Such a familiar thing. And medical field of such as mental disease, Such as the efficiency of work in a factory. I was listening to the feelings for the app to Kubota who is the developer.

SME management consultants, Yosuke Okamoto

Q:How did you came up with? Those that aim?

I was followed by irregular life in relation to work. Therefore, I was feeling the stress that the time of the meal is not common. There is a great writer Yasunari Kawabata, cartoonist Osamu Tezuka was attending the Asakusa of long-established cafe "Angelus". When I'm relaxing in the retro atmosphere, it was suddenly considered "Once freely make their own time". When recognized as a common lunch time, it might be able reduce stress? I was considered.

After the idea, UTC (Coordinated Universal Time) is not good for the organism? I began thinking. Society continues to work for 24 hours, And there is also a spread of smartphones, people have been pressed for time. However, I thought and its smartphone also become good medicine. We are working on a "future one Line Project" to go tell the good culture and environment in the future.

Q:The uniqueness of this application of patent-pending?

As a temporal hour system, it was present patent request to shift the time, it was only for 24 hours from 0:00 (0:00 is fixed).

This is not beyond the realm of daylight saving time and Japanese classical Time-table Method. This SoraJikoku, global society, will be the only watch that can respond to the 24-hour society.

Q:I heard that it has been attracting attention from the medical community and the medical field?

Approach in psychology has been attracting attention in this area. Teachers and university researchers are interested.

In my main job is content creation, sought appeal of design and grouping of UI, it may also be aware of the psychology in making. For that reason, or it was like psychology from a young age. I think that sort of thing is, perhaps have led to this idea.

Q:It is likely to be available to such training?

For example, it does not last long even after 2 hours self-study every day. Because not habit. I also heard that it is good just to sit for two hours. But a sense of accomplishment does not last unless obtained.

Here, set "1 hour" to "2 hours" on the "SoraJikoku". In other words, if the time of speed doubled, and will result in a lapse of 2 hours in the "SoraJikoku" after one hour. You can get a sense of achievement and this way. And then, gradually return to until the original time (2 hours), and finally become study habits 2 hours. I believe so.

Q: Other than use of the smartphone, there is a possibility of any use of media?

In the experiment, we found that the illusion occurs even with a small amount of light. By connecting to a large TV or projector, there is a possibility that the increase is more effective.

Verification of physiological changes is the future challenge. However, other effects on such beauty and diet by metabolic improvement, we believe that there is a possibility to help also of dementia research.

Other, flight attendant, night employee, such as submarine crew, it will reduce the stress is thought of those who have been forced to live with unreasonable as a human organism.

Also, if the property that take full communication equipment that smartphone, you can set the time on the remote. In addition to use in the home as a dedicated Wall Clock, also I think can be used to improve productivity in offices and factories.
